

Integrated Access Control/Video Surveillance System Provides High-Quality Video and Ingress/Egress Control

- Supplement your Access It! system with ViconNet Video Forensics
- Video windows pop up in response to any access event, alarm or control activation
- Video playback for online management of: alarms, events, reports or date and time inquiries
- Use RS2 Access It! Map Graphics window for video setup and commands
- Respond to video motion detection alarms with live camera view on demand
- ViconNet provides a true video surveillance system with capabilities such as: logical camera grouping, email or text alerts, flexible fps settings, web browser plug-in and the Virtual Matrix Controller
- Fully scalable

Vicon® Industries Inc and RS2 Technologies have joined forces to create a powerful, integrated Access Control and Video Surveillance system that combines the two technologies for a complete security solution. By adding ViconNet® to your existing or planned Access It!® Access Control system, you can enjoy all of the power of the ViconNet application through the Access It! Video Events screen and Map Graphics window.

ViconNet and Access It! share the same network and all communication between the two systems takes place on the network. The integration module processes the event triggers from the Access It! system, which are then utilized by ViconNet, to

provide the video stream. When an access control event or action occurs that has been defined as video related, video forensics are provided as well as the event log to present a complete record of what occurred and when it occurred.

In a typical installation, this will all take place within the Access It! application by virtue of the ViconNet plug-in. The user does not need to have the ViconNet application running or access it to play, record or search video, control camera PTZ functions or display cameras in logical groupings. However, if the user wants to take advantage of all of the powerful functionality offered by ViconNet, the complete application can be run and accessed on a parallel system.

With an Access It!/ViconNet system installed, you can do all of the following on your Access It! system:

- Display cameras from the ViconNet system in any order
- Play back recorded video for a specific time event or alarm from the ViconNet system for single or multiple cameras simultaneously with full playback control (play, stop, pause, frame by frame)
- Pan, tilt and zoom PTZ cameras through the Access It! video interface
- Record video from the camera where the alarm occurred (as configured on the ViconNet system)
- Select an event from the Access It! event list and play back the video
