Vicon Introduces Next Gen IQeye 9 Series of Cameras

Hauppauge, New York (March 28, 2016): Vicon Industries, Inc. (VII: NYSE-MKT) ("Vicon"), trusted designer and producer of video security systems and high-performance IP cameras, is pleased to announce the introduction of the full-featured, multi-megapixel IQeye 9 Series camera. These cameras will be available to demo with our VMS for a powerful security solution at ISC West Booth #23053.

The latest camera from Vicon, which will be available May 2016, provides wide scene coverage and highly accurate object detection with increased resolution and outstanding image quality. The new IQeye 9 Series also has increased processing power to effectively run analytics and VMS applications at the edge.

Powerful features: Offering a choice of manual or motorized varifocal lenses or optional CS-mount which allows for additional lens choices, WDR on select models and enhanced features such as analog video out, I/O relay and two-way audio capability.

Increased processing power: With on-camera storage and true day/night capability, these cameras are available in H.264 with up to 5MPresolution, and provide high quality megapixel images. Our proprietary IQzip technology compresses bandwidth thereby allowing additional storage capacity.

Standards-based: Both ONVIF and PSIA compliant, the IQeye 9 Series works seamlessly with all leading NVRs and video management software (VMS) providers.

Clean design: The IQeye 9 Series cameras are designed to conceal the lens and cables plugged into the connectors, giving the camera a clean, uncluttered look.

Embedded Vicon Analytics: The IQeye 9 series features free, edge-based analytics that seamlessly integrates into ViconNet VMS and alerts are generated without the need of an analytics server.

"With the new IQeye 9 Series camera, Vicon has utilized many of our latest technological developments to deliver a camera that will excel in all types of indoor environments, producing outstanding images and increasing productivity and accuracy in alarm detection with embedded video analytics," said Guy Arazi, Director of Product Management at Vicon.

For 48 years, Vicon has been an experienced designer and manufacturer of video management software, high-performance mega-pixel IP cameras, video storage solutions and access control systems. Vicon combines a complete security solution with a team-ecosystem of business and technology partners to bring the most comprehensive security solution in the market.
