

Vicon Announces New Surveyor® MKII Cameras

Introducing the all new Vicon Surveyor MKII HD PTZ camera dome with 30X optical zoom and a host of high-performance features at a lower price.

These new pan-tilt-zoom domes are designed for applications that require significant optical zoom with unmatched visual clarity and identification. These brand new MKII versions offer significant improvements in stability and performance over previous versions, supporting PoE+ (PoE midspan injector is included) for full functionality even when used in outdoor conditions when the heater is engaged.

Designed for backwards fit and function with the original Surveyor HD housings and mounting options, these new units offer an easy retro-fit or add-on option for current installations.

The transition from Vicon's current Surveyor HD series to the new MKII versions are taking place over the next few months. All orders for older versions will be substituted with the latest units as older stock depletes. Please refer to the chart on the following page.

Key Features

- Compatible with existing Vicon Outdoor, Impact-Resistant and Pressurized Housings
- HD 1080p resolution @ 30fps; 30X optical zoom
