

Vicon Announces New Valerus Integration

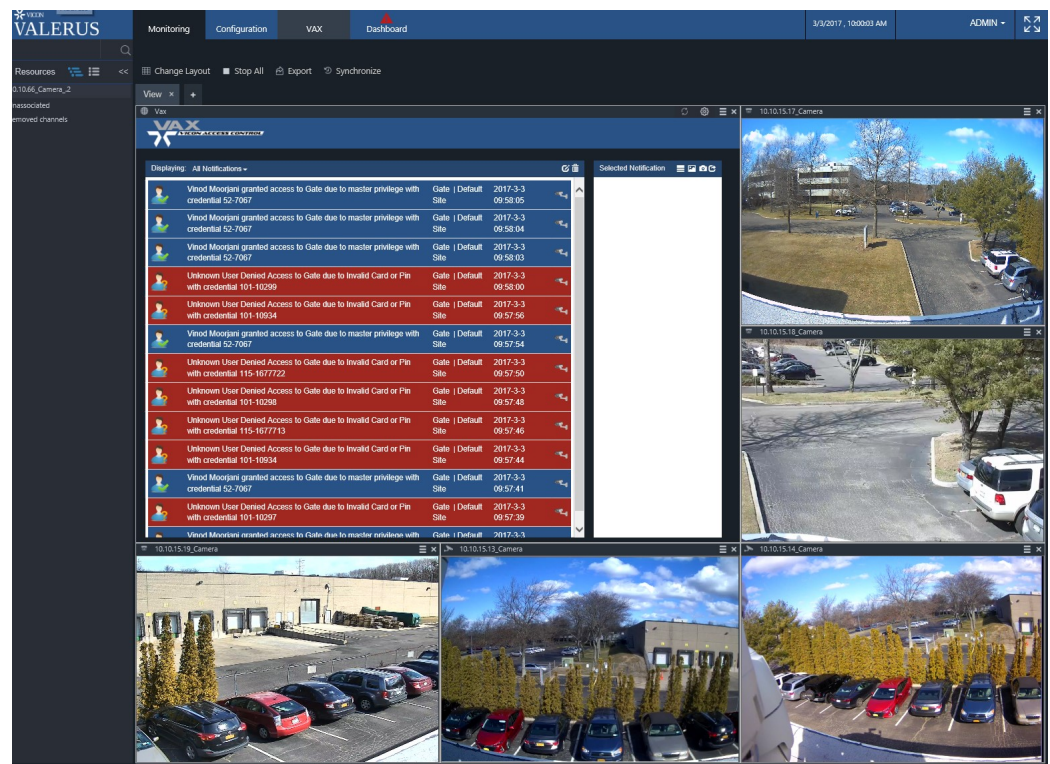

Vicon is excited to announce the next step in the evolution of our newly released Valerus Video Management System. This latest update includes the integrated connectivity between Valerus and VAX, Vicon's highly regarded access control solution.

This powerful integration provides users with a combined video and access control platform that seamlessly ties access events and readers to live cameras and stored video. The integration is simple to program and is free with the purchase of either system.

This updated version of Valerus (Valerus 1.1, build 131) is now available on Vicon's website at www.vicon-security and can be used to update any existing Valerus installation without additional licensing updates.

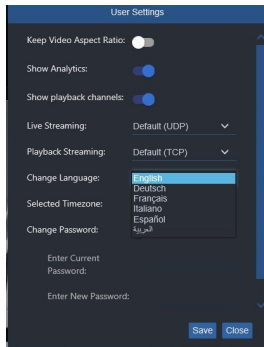

Key Features

- Vicon's new Valerus VMS is now integrated with VAX Access Control.
- The integration is free, regardless of how many cameras or readers.
- It's intuitive and simple to associate cameras to doors and readers.
- The VAX monitoring Desktop displays live and recorded video right in the VAX interface.

- Each camera can be associated to a specific door.
- The swipe of an access card automatically displays the event and associated live video on the Desktop, providing visual verification of the card holder and piggyback attempts.
- Clicking on past Access events brings up recorded video for immediate playback.

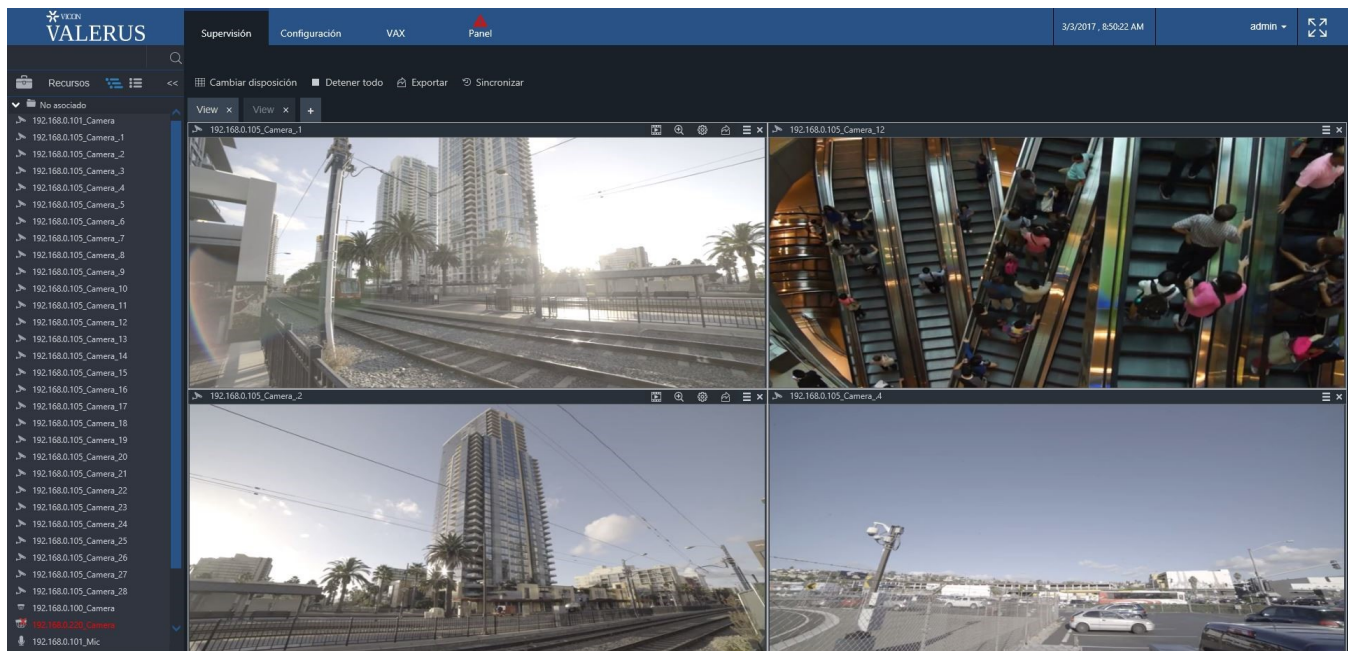

Multi-Language Support

This new Valerius update also supports multiple languages in the interface. Under “User Settings” the user can select from the following language options:

- English; Spanish; French; Italian; German; Arabic

Once the desired language is selected, all text in the Valerius interface will change, making the owner’s operational control of the system that much easier. Language selection is specific to each user’s sign-in, allowing for a mix of languages used throughout a single system.

Valerius: It's all about Advanced Simplicity!

Valerius is Vicon’s latest cutting-edge Video Management System that was designed to take the pain out of buying, installing and managing complex VMS systems. Advanced Simplicity isn’t just a catch phrase, it’s reality.

This system was built from the ground up around concepts like ONVIF-at-the-core to drive True Open Standards, Auto-Discovery and Configuration logic to minimize installation and an intuitive Interface that includes a system-wide health monitoring dashboard and multiple pre-set views that are user specific.

If you’re frustrated with your current VMS options, look into Valerius. Our simple two-tier software selection makes choosing the right option worry-free and our Upgrade Protection Plans are the easiest you’ve ever been offered. Our free trial version is available at www.vicon-security.com.
