

## Product at a Glance

- ▶ Supplement your Lenel Access Control system with the ViconNet Video for better forensics
- ▶ Live video windows pop up in response to access events and playback of video from events list
- ▶ Respond to video loss and video motion detection alarms received from the ViconNet system
- ▶ ViconNet provides a true video surveillance system with capabilities such as: logical camera grouping, email or text alerts, flexible fps settings, web browser plug-in and the Virtual Matrix Controller)
- ▶ Live camera view on demand
- ▶ Fully scalable

Vicon® Industries Inc. and Lenel (a UTC fire and security company) have joined forces to create a powerful, integrated Access Control and Video Surveillance system that combines the two technologies for a complete security solution. By adding ViconNet® 8.1 to an existing or planned Lenel OnGuard® 7.1 Access Control system, all of the power of the ViconNet application is available from within the OnGuard application. ViconNet has been fully certified to work with OnGuard under Lenel's OpenAccess™ Alliance Program.

ViconNet and OnGuard share the same network and all communication between the two systems takes place on the network. The integration module processes the event triggers

from the OnGuard system, which are then utilized by ViconNet, to provide the video stream. When an access control event or action occurs that has been defined as video related, video forensics are provided as well as the event log to present a complete record of what occurred and when it occurred.

In a typical installation, this will all take place within the OnGuard application. The user does not need to have the ViconNet application running or access it to play, record or search video. However, if the user wants to take advantage of all of the powerful functionality offered by ViconNet, the complete application can be run and accessed on a parallel system.

## Lenel/ViconNet Integration

The ViconNet system (version 8.1 and above) is completely integrated with the Lenel OnGuard (version 7.1) Video Viewer, Alarm Monitoring and Map Designer modules and provides the following functionality:

- ▶ Import and display live video from any cameras connected to the ViconNet system in any order
- ▶ Control PTZ cameras, including presets on event
- ▶ Play back recorded video for several cameras simultaneously with full playback control (play, stop, pause, rewind, fast forward, frame by frame)
- ▶ Display video from a specific area
- ▶ Display video from several areas
- ▶ Receive and log video loss and motion detection from the ViconNet system
- ▶ Monitor video to follow up on alarm (live stream pop-up)
- ▶ Launch guard tours
- ▶ Play back video for specific cameras
- ▶ Provide graphical map of the access control and camera location
- ▶ Allow the operator to call up video from the map

Typical Lenel OnGuard/ViconNet Network Setup

Lenel OnGuard Alarm Screen with ViconNet Video Feed
