Vicon Announces the Valerus-ViconNet Gateway Tool

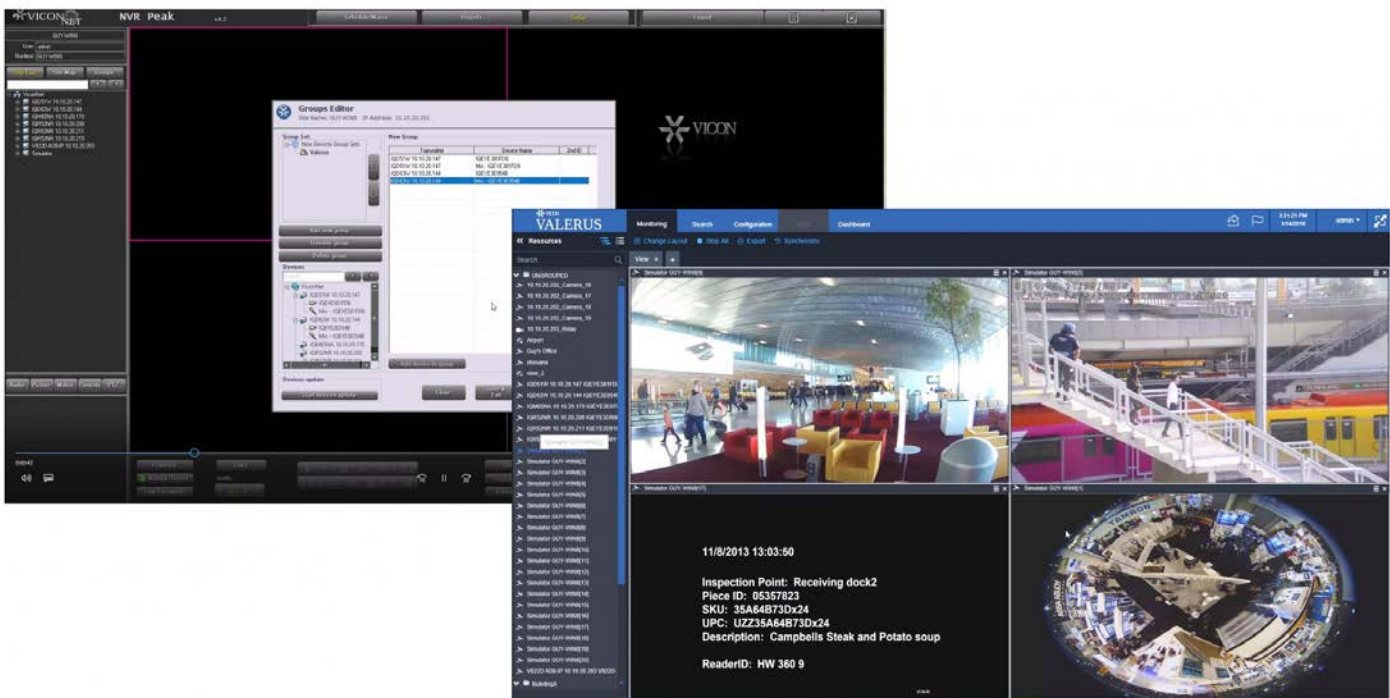

Offering a Simple Migration Path from ViconNet to Valerus VMS

The Valerus-ViconNet Gateway tool, a new Valerus version 18 module, is designed to bridge existing ViconNet systems to Vicon's Valerus VMS. The Gateway tool offers a simple migration path allowing you to continue use of your legacy ViconNet equipment, while taking advantage of Vicon's Valerus open-platform browser-based video management software (VMS). The Gateway tool is offered either pre-installed on certified Vicon hardware or as software for installation on COTS hardware.

There is no need to replace old machines; Valerus will connect to the entire legacy ViconNet system through the "Gateway" displaying live and recorded video from selected ViconNet resources. This Gateway will eliminate the need for a wholesale rip-and-replace effort, saving money, time and headaches.

Gateway Tool Snapshot

- Displays live and recorded video from selected ViconNet resources
- Eliminate the "forklift upgrade" approach
- No loss of recorded data
- Minimal entry cost and flexible upgrade future
- Supports ViconNet V5.6d and higher

Bridge existing legacy ViconNet systems to Valerus VMS

The Gateway tool will provide a migration from ViconNet to Vicon's Valerus VMS platform, which has been designed to eliminate all the pain points typically associated with video management solutions. The confusing and complex processes of purchasing, installing, licensing, configuring, operating and maintaining most of today's VMS solutions have all been addressed! Our open-platform, enterprise quality software promises to redefine what customers can, and should, expect from their video surveillance system.

Gateway Tool Minimum Requirements

- ViconNet connecting via Gateway needs to be at version 5.6d or higher (older versions are not supported)
- The Gateway is supported by Valerus version 18 and higher
- In systems where a dedicated Application Server is used, the Gateway can run on that computer and support up to 75 ViconNet video channels
- For systems with more than 75 ViconNet video channels a dedicated computer is required
- The ViconNet Gateway computer must run on a 1Gbps network

Functionality Supported through the Gateway:

- Live video / audio viewing (can be used in views and tours as well)
- Playback of video / audio recorded on the ViconNet devices
- Control of PTZ cameras on the ViconNet devices
- Dewarp of supported 360° cameras on the ViconNet system
- Thumbnail and Museum Search of video recorded on the ViconNet devices
- Each Gateway can support up to 500 ViconNet video channels (using multiple Gateways is supported)
- Export through the Valerus interface

Valerus-ViconNet Gateway Components

Software

The Gateway module is a separate installation that is available for Valerus VMS (starting version 18)

ViconNet 8.3 (will be available from our website)

The Gateway can be installed on any computer meeting the minimum requirements (similar to NVR)

Hardware

The Gateway can be purchased pre-installed on Vicon certified hardware; each Gateway requires a license

Hardware specifications are similar to those of the Valerus Recording Server (NVR)

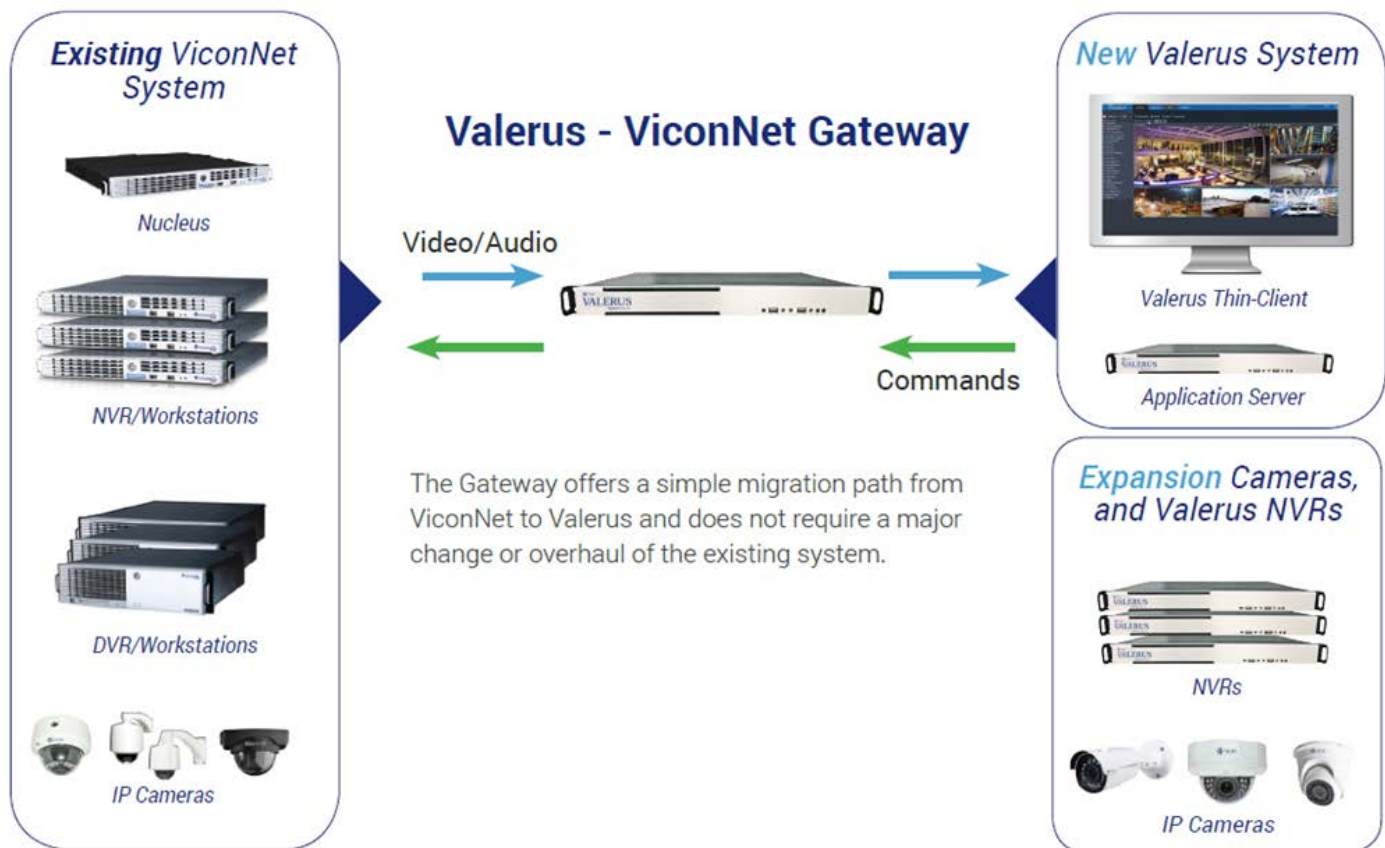

License

The Gateway requires a license per Gateway computer

The ViconNet installation on the Gateway does not require licensing

This diagram displays the simple migration path to bridge existing ViconNet systems to Valerus VMS

The Valerus-ViconNet Gateway pulls video and audio from the ViconNet VMS and sends it to the Valerus Clients transparently. On Valerus, the video and audio channels appear as any other resource and can be used exactly as if they are an IP camera connected directly to Valerus.

Vicon's Valerus Software Maintenance Made Easy

Stay Up-to-Date with Upgrade Protection Plans (UPP): If you're a current subscriber to Vicon's powerful and affordable 1-, 3-, or 5-year Upgrade Protection Plans, you already know that you can download this latest version and take advantage of all the new features. Your Valerus system will automatically unlock these powerful capabilities without any updates to licensing.

Without a UPP: If you are not able to subscribe to the Upgrade Protection Plans, you can still take advantage of the platform enhancements and corrections by downloading this version and installing it. If the new features are exciting to you, simply contact Vicon for a quote on a system upgrade.
