

## SALES ALERT

# Introducing Valerus 22.1

With this update, you can securely auto-archive long-term storage onto network drives, further centralize your LPR, Access Control and Video Surveillance and improve user management.

## Overview

### Announcing Our Early Adopter Release of Valerus 22.1

Vicon's proud to announce the early release of our renowned Valerus VMS. This version is all about enhancing platform centralization through our integration framework, giving you more storage and archiving flexibility and improving the overall user experience.

These new features help users securely store more long-term footage within their existing network storage infrastructure. Our enhancements to our integration framework keep operators focused on a single interface rather than cycling or swiveling through multiple monitors and programs.

Finally, our latest user experience enhancements come directly from our user feedback. Among the many updates, we've streamlined user management to save you time, added monitor management so administrators can control monitors from any system centrally, added new reports for more efficient reporting. You asked and we listened.

Visit [vicon-security.com](http://vicon-security.com) to download the early adopter release today!

## Benefits At-a-Glance

- ▶ Store more long-term video footage securely to network drives and data centers
- ▶ Monitor your operation from a single interface with centralized video, access control and LPR monitoring
- ▶ React faster with data-rich integration event tiles shown directly on the monitoring interface
- ▶ Customize and configure Valerus easier than ever with several user experience enhancements
- ▶ Manage system monitors faster with our new central monitor management features

### Why an early adopter release?

We want to give our customers insight into the upcoming release so they can provide any input or feedback before we formally update the production version of Valerus.

This release has been tested extensively by our beta community, so it's a stable release. We are simply changing the way we release our Valerus software in order to have a better, larger and more meaningful feedback loop with our userbase.

## Store your data however, wherever and whenever you want

Valerus can now map directly to your network storage devices, whether it's a NAS device, someone else's computer, another server, or even a data center. This gives users more control of their data, allowing them to store long-term footage without the limitations of their local storage.

This is ideal for facilities who want only a short-term video storage on a local machine, but for security purposes, prefer to have Valerus store long-term footage into a secure network server.

## Schedule archives on your time

The feature also allows you to schedule archiving whenever you would like. You can schedule it nightly while network usage is low or archive throughout the day. You also have choice to archive all footage or only events, like motion detection, and purge the rest. It's all in your control.

## Access archived footage without frustration

What makes our network storage feature shine is that all of your archived data is online and accessible, regardless of where it's stored, so you can retrieve it seamlessly. You don't need to find which drive it's on to re-import footage—Valerus does it all for you.

## Setup in minutes with absolute flexibility

See just how simple we've made auto-archiving to network drives. It can be configured in minutes and accessed any time.

## Centralize your license plate recognition, access control and video monitoring

Unleash the power of a deeper integration framework with a centralized management of alerts and notifications, directly from the Valerus interface. This ensures operators can see a full picture of their access control and video surveillance all from a single interface. No need to swivel between screens and windows to find active alarms and alerts--you can view it all in one place.

### Respond to all your alarms in one place

Integrate VAX and LPR into your Valerus Alarm Management Suite for faster reaction times and a better way to uncover, respond to, and document events and associated video.

### Respond to live events faster

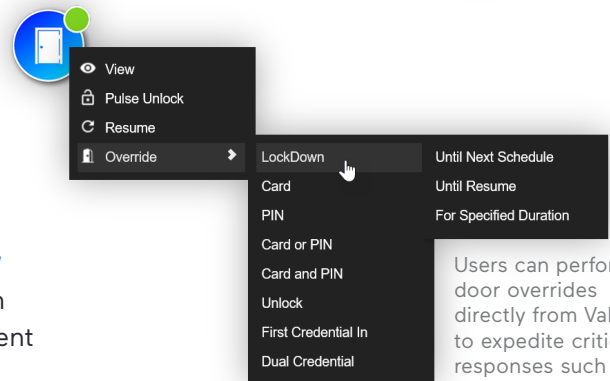

From your Valerus map, you can see LPR and Access Control events as they happen. You can view associated camera footage with two clicks, and for Access Control you can even trigger door overrides right from Valerus.

### See the live event details on the Monitoring window

Our new event tiles allow you to see detailed event information without leaving the monitoring screen. They'll popup all pertinent information on the event so you can react in seconds.

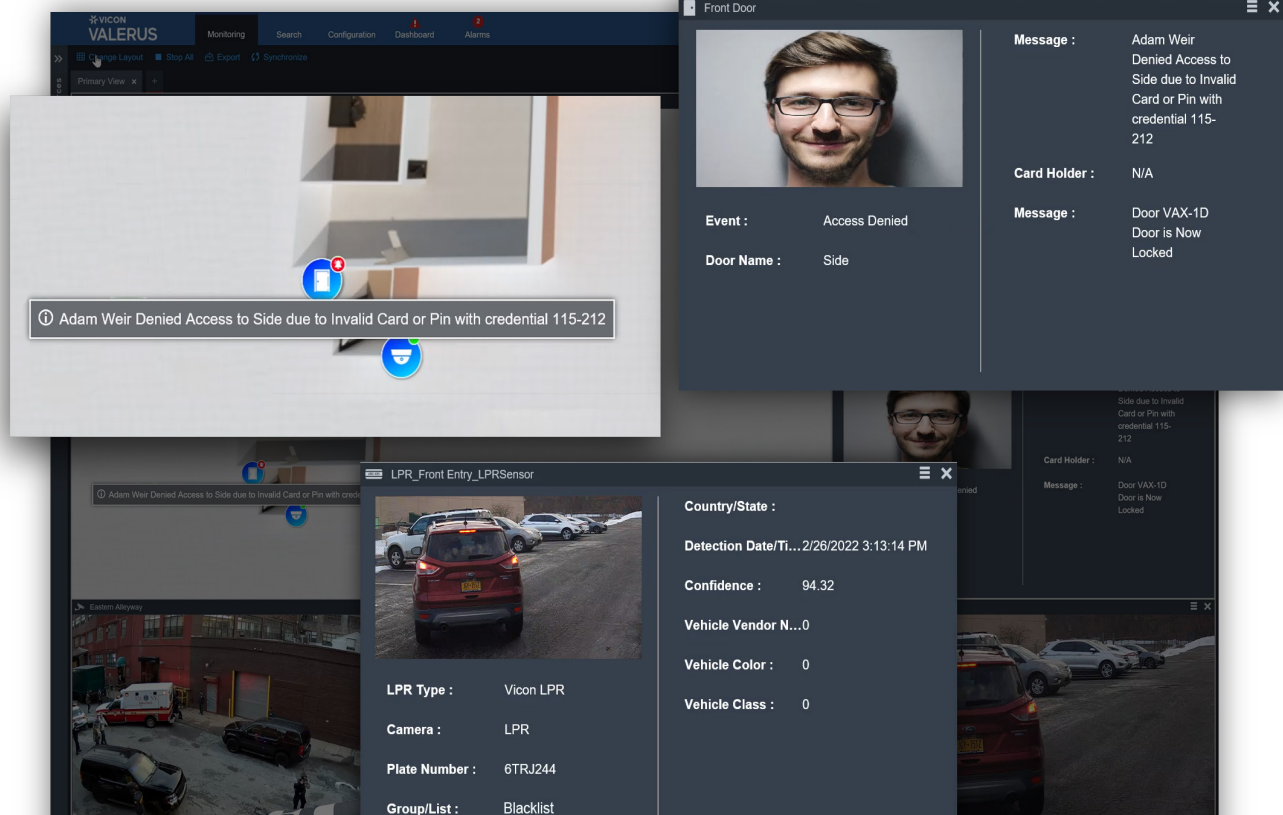

Integrate VAX and LPR events within the Alarm Management Suite.

Users can perform door overrides directly from Valerus to expedite critical responses such as lockdowns.

From Valerus' live monitoring interface, users can see details on LPR and Access Control events so they can respond immediately.

## A constant UX evolution, thanks to your feedback

At Vicon, we strive to make continuous improvements to support easier user management and increase capabilities. We encourage additional feedback as we continue to evolve Valerus and its future releases.

### Centralized monitor management

Centrally configure and manage your monitors connected to a Valerus display facility. Identify and represent multiple monitors, name them and designate whether they can be used for alarms. No more running from machine to machine to do this.

### Map & resources list enhancements

When using partners resources on the interactive map, you can immediately access the camera's live feed by simply clicking on the partner icon for a thorough response to potential critical events. This feature is like having a "virtual camera" automatically pop-up live feeds and allows integrated partner resources to show on the map.

### User management

Excel templates are now available, allowing you to integrate a list of your desired users in just a few clicks. You can even create this list offline and import when you're ready.

### Prevent camera View overrides

Control who can, and can't, override pre-defined camera Views by granting specified users with the authority to do so. This allows system administrators to ensure that only users with particular permissions have the ability to override a camera within a View.

### New HTML camera reports

This user-friendly feature is advantageous to system administrators because it provides easy-to-read reports of camera settings, like the camera model, firmware and snapshot of the camera's field-of-view.

### New screen layout options

Additional tile layouts, 3x2 and 2x5, were implemented for specific user preferences.

## Tier Comparison Chart

The Valerus software is provided for download on Vicon's website. Valerus has centralized licensing; a single license code activates all components. The key to activating the software is determined by the license type selected; each license is per edge device (with a single IP address), regardless of the number of channels that device provides. Refer to the Valerus Tier Features table.

The table below provides a comparison of the features and capabilities included in the range of Valerus VMS license tiers. A no-cost tier for trial systems and fully functional demos is available.

	CORE	PRO	ENTERPRISE
GENERAL OPERATIONAL PARAMETERS			
Maximum number of devices per system	35	Unlimited	Unlimited
Maximum number of simultaneous clients	10	Unlimited	Unlimited
Maximum number of recording days	Unlimited	Unlimited	Unlimited
Museum Search	-	Yes	Yes
Microsoft Active Directory support	-	Yes	Yes
Support analog HD video (AHD)	Yes, w/Valerus encoder	Yes, w/Valerus encoder	Yes, w/Valerus encoder
Alarms Tab	-	Yes	Yes
Scheduled auto-archiving	-	-	Yes
Snapshot	Yes	Yes	Yes
Dashboard	Yes	Yes	Yes
Audit Log	-	Yes	Yes
Integration Framework with 3rd party applications	-	-	Yes
Map storage to network drive	-	-	Yes
Centrally manage all monitor screens	Yes	Yes	Yes
Designate a monitor as an alarm monitor	-	Yes	Yes

## Valerus Software Licenses

VALERUS SOFTWARE LICENSES	MODEL
Valerus CORE device connection license; one license per device (regardless of number of channels on device); for systems with up to 35 Vicon edge devices	VLR-VCORE-LIC
Valerus CORE device connection license; one license per device (regardless of number of channels on device); for systems with up to 35 third party edge devices	VLR-CORE-LIC
Valerus PRO device connection license; one license per device (regardless of number of channels on device); for systems with unlimited Vicon edge devices	VLR-VPRO-LIC
Valerus PRO device connection license; one license per device (regardless of number of channels on device); for systems with unlimited third party edge devices	VLR-PRO-LIC
Valerus ENTERPRISE device connection license; one license per device (regardless of number of channels on device); for systems with unlimited Vicon edge devices	VLR-VENT-LIC
Valerus ENTERPRISE device connection license; one license per device (regardless of number of channels on device); for systems with unlimited third party edge devices	VLR-ENT-LIC

## Valerus Version Upgrades

MODEL	PRODUCT CODE	DESCRIPTION
