### General

Valerus VMS, Vicon's full-featured centralized video management system, is also available for use as a desktop application. For those users who prefer not to work within the browser environment but rather run the application locally and possibly offline, the Desktop Client solution provides a new modern look of Valerus. The operation will be familiar to any Valerus user, so no relearning will be required, but the Desktop Client application does offer a new level of power, performance and reliability.

The Valerus Desktop Client software is available on Vicon's website. Valerus users will be able to login to the Desktop Client using their existing login credentials.

Please read the <u>Desktop Client Release Notes</u> to understand known issues and some current limitations of the application.

### Main Features of the Valerus Desktop Client:

• Fast login and camera callup response speed.

 Run more video simultaneously without any degradation; optimized for GPU decoding that utilizes all available resources.

• Upgraded searches; easier to use and digest; key information is prioritized on the page.

• Alarms Management remains a powerful tool with speedy video callup.

### **Installing the Desktop Client**

Existing Valerus users will be able to use the Desktop Client solution with their current Valerus system.

- Go to Vicon's website and download the Desktop Client zip file to your local PC.
- Right click on the compressed file and select to "Extract" to Valerus\_Client\_Setup\_file just downloaded" option from the dropdown menu to unzip this file.
