

# Updated Firmware for HDEExpress

## General Description

Vicon has released updated firmware for certain HDEExpress models to allow using them with ViconNet 8.1 in the same way the newer (L3 and P3) models are being used. The firmware also contains the latest bug fixes.

Covered by this version are the HDEExpress 4 and 8 channel units with VGA ports as well as the older 16 channel unit. Prior versions of the unit (HDXPRES-4 / 8 without a VGA port) are not expected to be supported in ViconNet.

The updated firmware is as follows:

<b>HD Express model</b>	<b>Firmware</b>	<b>New Firmware</b>
4 channel (HDXPRES-4V)	36110.1.104701.96	36110.1.106402.96
8 channel (HDXPRES-8V)	36210.1.104701.96	36210.1.106402.96
16 channel (HDXPRES-16)	22310.1.104701.96	22310.1.106402.96

## Important note!

These models of the HDEExpress do not support the IQeye line of cameras. All newer models (model number ending with L3 and P3) support the IQeye cameras.

See the Vicon website for further details.

## Performing Firmware Update

The latest firmware is available on Vicon's website from the Learn and Support menu – Software Downloads – HDEExpress software; a link is provided below.

<http://www.vicon-security.com/learn-and-support/software-downloads#hdexpress-software-and-firmware>

The correct firmware (by model) needs to be placed on a USB thumb drive and plugged into the HDEExpress.

- Access the setup menu – System – System Management.
- Click the button for FW update.
- Select the firmware version from the list and click UPGRADE.
